SLIDING DOORS

INFRARED HAND SENSOR • WIRELESS PRESS • FOOT INDUCTIVE SWITCH • BATTERY PACK

NJM Groups Door Safe Automated system is a contactless solution of entering and exiting your buildings, helping keep coronavirus at bay.

Opening and closing doors are an unavoidable part of our daily lives, and with NJM Group's AB-DSL-200 Door Safe Automated system, this highly practical solution will not only help decrease the spread of germs, but it will allow Alexa and Amazon home access from your phone.

NJM Group's Door Safe System can provide access into your residence/premises when you're not there, with full accountability. For additional security, the Door Safe System can work in synch with CCTV devices, thereby making it the ultimate home security system. NJM Groups Door Safe Automated Solutions also acts as a form of Personal Protective Equipment (PPE). PPE is equipment that will protect both workers and the general public against health and safety risks.

Our Sliding Door System range is reliable, suitable and a highly secure safety method. Highlighted features of this product includes; a microwave sensor, smart touch panel, an infrared hand

sensor, a digital access keypad, a safety beam (single/double), a wireless press switch, a key switch, a battery pack, a foot inductive switch, a wireless press switch, a glass clamp and an adjustable floor guide.

NJM Groups Door Safe Automated Systems are both manufactured and custom designed to suit any architectural design and requirements. This system includes a DDA compliant remote control, allowing a disabled person to open the door at their own discretion. The Sliding Door System can be used at a range of locations including office buildings, stadiums, hospitals, high security areas, schools, universities, shopping centres, government buildings and more.
